

# Major Connection Facilities

What is a Major Connection Facility?

Major connection facilities are park and ride lots, transit centers and other major facilities designed to connect multiple modes.

Why were these locations chosen?

These conceptual projects have been identified in past official planning documents by STA. Additionally the connection facility met one of the following criteria:

- 1) Is a logical terminal for existing routes and HPT
- 2) Connects two or more routes (including at least one HPT line)
